Application Tips

1. Never heat TE module more than 200°C (TEC assembled at 230°C).
2. Never use TE module without attached heat sink at hot (bottom) side.
3. Connect TE module to DC power supply according to polarity.
4. Do not apply DC current higher than I_{max}.

Installation

1. Soldering of object to be cooled.
Method suitable for a TE module with the metallized cold side (Ordering Options. Item F). Soldering requires careful procedures:
 - A. Never overheat TEC (Cautions. Item 1).
 - B. Use solder with melting point less than TEC mounting solder (Ordering Options. Item C).
2. Gluing of object to be cooled.
Method available by glues with good thermoconductive properties. Not recommended for high vacuum applications and long operations at high temperature.
